SKILLS AND TECHNOLOGIES

Languages: JavaScript (ES6+), HTML, CSS, SQL, Shell Script
Libraries and Frameworks: React, Redux, Highcharts, Node.js, Svelte, Chart.js, Jest
Tools: Git, Webpack, Docker, AWS, Postman

EXPERIENCE

WiseLayer

Software Engineer

May 2022 – Present

Employed **React**'s component-based library with localized state and lifecycle managing hooks and context to deliver a progressive user experience for a marketplace offering proactive notifications and analytics dashboards built on top of live data processed from common-use ERP systems.

Harnessed **Redux** Toolkit's opinionated, scalable framework to efficiently manage complex, global state through numerous views central to the user flow of WiseLayer's customer interfaces.

Capitalized on **Material-UI**'s comprehensive component library to develop and manage a consistent brand experience over a responsive, modular frontend.

Empowered real-time, data-driven insights through **Highchart**'s robust charting library, effectively transforming preprocessed data into visually engaging and actionable business intelligence.

Refined **Keycloak**'s authentication templates to facilitate a harmonious user path, optimizing login, registration, and password management flows for standardized access across the application.

Seamlessly integrated third-party SDK's (**Paragon**, **Mixpanel**), leveraging external capabilities with internal business logic to provide one-click ELT functionality, enhancing data accessibility and simplifying analytics for end users.

Facilitated collaborative, team-centric platform updates through **Git** version control and **Bitbucket** Pipelines, fostering a resilient **CI/CD** environment by engendering both code consistency and risk mitigation during product deployment.

Incorporated **Agile** methodologies and forged strong connections with leadership to promote a culture of adaptive planning, progressive development, and rapid delivery.

OPEN SOURCE

Mist

Software Engineer

2022

Leveraged **Svelte**'s compiling, state-managing architecture to construct a reactive, lightweight SPA for an application performance monitoring tool designed to provide tangible analytics for unpublished, locally hosted CloudFlare workers (a.k.a, serverless functions).

Integrated **Chart.js** to produce dynamically generated visual metrics displaying client-initiated serverless function request times, durations, status codes, and performance averages over multiple recording sessions.

Implemented a **Node.js** server utilizing **Express.js** to efficiently monitor performance recording sessions and ferry the OpenTelemetry-gathered tracing data on worker requests to a SQL database to be queried for display.

Architected **Miniflare** logic to generate a locally hosted, simulated cloud environment for the mounting, testing, and measuring of pre-deployment CloudFlare worker performance.

Wrote SQL (**PostgreSQL**) script to construct relational database schema containing records of worker recording session data and metrics with strict retrieval rules ensuring ACID compliance.

EDUCATION

Codesmith
Advanced Software Residency Program
United States Army Armor School
Armor Crewman - 19K
